CHAPTER-3 Hits Our Bull Case—NDA Submission in 1H27; PT to $65

September 8, 2026

- **Bottom Line: We are raising our price target after PHVS reported stellar Ph3 topline data for deucrictibant in Hereditary Angioedema/HAE.** 83% attack-rate reduction (87% in Type I & II) is in line with our bull case and means deucrictibant has injectable-like efficacy with convenient oral dosing. The two debates that surround the readout are: **1)** what is the significance of the two liver enzyme elevations, and **2)** can deucrictibant get a broad label with only 5 nC1INH patients and a mixed efficacy response. We don't think the liver enzymes are a cause for concern (see our note), and even without normal C1 on the label (we estimate ~1000 US pts), we see broad uptake for deucrictibant in both the prophylactic and on-demand settings. While this success may have been baked in following a strong year for the stock, we think this is an overwhelmingly positive readout and positions PHVS as a prime take-out candidate. If we apply KalVista's 2.8x peak sales acquisition multiple to PHVS' platform (~$2B consensus peak sales), that implies a valuation of ~$5.5B. **Model Updates:** We are increasing our POS for prophy to 95% which brings our PT to $65 (up from $50). Reiterate Outperform.
- ***Continued Within...***

- **Deucrictibant XR has injectable-like efficacy in a daily oral pill.** Treatment with deucrictibant XR in participants with all types of hereditary angioedema (HAE) showed 83% attack rate reduction ($p<0.0001$). In Type I and II HAE, which more closely resembles other prophylactic clinical trial populations, attack rate reduction was 87%. Protection onset was rapid (therapeutic exposure within a day, steady state in 2–3 days) and durable through 24 weeks, and nearly half of treated patients were completely attack-free for the full treatment period.
- **Liver enzymes should not impact labeling.** There were 3 Gr3 AEs: 1 tooth infection and 2 "Level 2" liver enzyme elevations (3.6%, 2/55, defined as level 2 by FDA guidance here, Table 56). Per mgmt, these elevations were 'slightly above' 5xULN and asymptomatic with no elevated bilirubin. Both patients had confounding factors: either long term androgen therapy (continued therapy and completed the trial) or fatty liver disease (discontinued trial). The discontinuation in the pbo arm was due to urticaria. By definition, a Gr3 elevation is >5-20x ULN, and it appears these elevations are on the low end of that range. We are encouraged that bilirubin was not affected and that this has not been seen in any prior studies. Recall, TAK's (Not Rated) Takhzyro had three liver enzyme elevations >3xULN and one elevation >8xULN in its Ph3, and one patient discontinued due to elevated LFTs (AST 4.1x ULN). In the Orledayo (BCRX, Not Rated) Ph3, there was one asymptomatic Gr4 ALT elevation in a patient with previous androgen exposure who discontinued the study drug. Taken together, we do not believe these elevations reported today will warrant liver monitoring on the label.
- **Efficacy in nC1INH was mixed, though lack of broad label does not change the thesis.** There were only 5 patients with HAE with normal C1 inhibitor (nC1INH) in the trial: 2 in pbo and 3 in the treatment arm. Of those treated, one patient had <50% attack rate reduction, one was at 90%, and one was fully attack free. We estimate ~1,000 nC1INH patients are in the US, though genetic testing is not standard, so many patients are initially treated as Type I or II patients. Still, deucrictibant's direct mechanism on the bradykinin receptor makes sense for nC1INH, so we don't expect there to be any competition from other prophylactic therapies in this population. Even without nC1INH in the label, we expect deucrictibant to be used broadly in prophylactic HAE, and the lower penetration in nC1INH does not meaningfully impact our peak sales (~$1.3B in 2038).
- **What's next for deucrictibant: NDA submission in 1H27.** CHAPTER-4 OLE study of deucrictibant XR for the prophylaxis of HAE attacks is ongoing, and the data are gating to expected NDA submission in 1H27. Topline data from Part 1 of CREAATE (NCT07266805), a global, pivotal Ph3 evaluating deucrictibant XR for the prevention of AAE-C1INH attacks, are anticipated in the 1Q27. Enrollment in CREAATE is ongoing and progressing as planned. Commercially, PHVS says it will have ~95% of its sales infrastructure staffed by YE26 and is targeting >90% live payer coverage conversations by on-demand approval, using CHAPTER 1 Ph2 prophy data today to pre-condition payers ahead of the prophy launch. Management also confirmed EU filing validation with EMA is already in motion alongside the US filing.
- **The valuation is compelling.** The company is currently trading around a $2.5B market capitalization. This is just above the range of KalVista's (Private) takeout valuation ($1.9B), a deal that centered entirely around an oral on-demand medication (see here). Considering Pharvaris has both an oral on-demand and

prophylactic option, each with potential best-in-class positioning, we view the current valuation as compelling for Pharvaris. For reference, KalVista was taken out at 2.8x peak sales (on-demand only). If we apply the same multiple to current consensus estimates for Pharvaris' platform (~$2B peak across on-demand and prophylaxis), that implies a valuation of ~$5.5B. We think deucrictibant makes sense for any pharma with an existing presence in allergy/immunology.

- **Updates to the model.** We increased our POS for deucrictibant in prophylactic HAE to 95% (up from 60%). We lowered peak penetration in normal C1 to 15% to reflect uncertainty around potential labeling, though many C1INH patients are not genetically tested so they are treated as Type I or II HAE patients. We note there is additional upside remaining in the acquired angioedema due to C1-inhibitor deficiency (AAE-C1INH) population which is currently ongoing in Ph3 with data expected in 1Q27.

INVESTMENT THESIS

We rate PHVS shares Outperform. PHVS, led by an experienced and deeply knowledgeable management team, is developing therapies for those with rare diseases, with a focus on hereditary angioedema (HAE), targeting the well-understood and clinically validated bradykinin B2 receptor. While there are many efficacious HAE therapies available, most require burdensome subcutaneous injections or infusions, inconvenient dosing regimens, or undesired side effects, all of which further disrupt the life of the patient. Numerous patient surveys and conversations with KOLs demonstrate the need for new and more convenient therapy options. PHVS is building a budding HAE platform around its lead asset, deucrictibant, a first-in-class, oral small molecule antagonist of the bradykinin B2 receptor, which has the potential to offer comparable efficacy to currently available therapy while also allowing for discrete and quick oral administration. In our view, deucrictibant is partially de-risked, as icatibant (Firazyr), an approved therapy for HAE, utilizes a similar mechanism that acts directly at the bradykinin B2 receptor to treat all types of HAE by inhibiting bradykinin interaction with its bradykinin B2 receptor target. While extremely efficacious, icatibant, like many of the approved therapies, is limited as it requires an invasive route of administration, a major sticking point for patients. PHVS plans to leverage the same API and is developing deucrictibant into two different formulations: a soft-capsule form (PHVS416) for the on-demand treatment of an HAE attack, and an extended-release tablet formulation (PHVS719) for the prevention of HAE attacks. We ascribe an 95% probability of success (PoS) to deucrictibant for the treatment of on-demand attacks, and project gross peak sales of ~$440M in 2037E. As for deucrictibant for the prophylaxis treatment of HAE attacks, we ascribe a 95% PoS and project gross peak sales of ~$1.3B in 2038E. Additionally, PHVS is exploring deucrictibant in acquired angioedema due to C1 inhibitor deficiency, which is not currently included in our valuation.

VALUATION

We derive a one-year PT of $65 for PHVS based on a DCF analysis using a 13% discount rate and a 2% terminal growth rate, converting the implied market cap from EUR to USD by using a 6-month FX average, representing an implied ~$3.8B market capitalization. Our valuation is driven by probability-adjusted revenue for the two different formulations of deucrictibant for HAE. We ascribe a 95% PoS for on-demand and a 95% PoS for prophylaxis.

RISKS TO VALUATION

As a late-clinical-stage company, risks to PHVS include potential clinical, regulatory, and financial setbacks. Promising early clinical data may not translate to success in later-stage development. Regulatory decisions are unpredictable and may adversely affect the commercial potential of Pharvaris product candidates. Competition in the hereditary angioedema space (e.g., Takhzyro, Haegarda, Ekterly, Orladeyo) may limit commercial success(es) of Pharvaris products, if approved. From a financial perspective, dilutive financing is a potential risk. Other unanticipated situations could arise that may negatively or positively impact the stock.

Valuation

We derive a one-year PT of $65 for PHVS based on a DCF analysis using a 13% discount rate and a 2% terminal growth rate, converting the implied market cap from EUR to USD by using a 6-month FX average, representing an implied ~$3.8B market capitalization. Our valuation is driven by probability-adjusted revenue for the two different formulations of deucrictibant for HAE. We ascribe a 95% PoS for on-demand and a 95% PoS for prophylaxis.

Risks to Valuation

As a late-clinical-stage company, risks to PHVS include potential clinical, regulatory, and financial setbacks. Promising early clinical data may not translate to success in later-stage development. Regulatory decisions are unpredictable and may adversely affect the commercial potential of Pharvaris product candidates. Competition in the hereditary angioedema space (e.g., Takhzyro, Haegarda, Ekterly, Orladeyo) may limit commercial success(es) of Pharvaris products, if approved. From a financial perspective, dilutive financing is a potential risk. Other unanticipated situations could arise that may negatively or positively impact the stock.

Distribution of Ratings/Investment Banking Services (IB) as of 06/30/26				
			IB Serv./Past 12 Mos.	
Rating	Count	Percent	Count	Percent
BUY [OP]	241	80.3	142	58.9

SELL [UP]	2	0.7	0	0

Explanation of Ratings

Outperform (Buy): We expect this stock to outperform its benchmark over the next 12 months.

Market Perform (Hold/Neutral): We expect this stock to perform in line with its benchmark over the next 12 months.

Underperform (Sell): We expect this stock to underperform its benchmark over the next 12 months.

The degree of outperformance or underperformance required to warrant an Outperform or an Underperform rating should be commensurate with the risk profile of the company.

For the purposes of these definitions the relevant benchmark for "Leerink Partners" branded healthcare and life sciences equity research will be the S&P 600® Health Care Index for issuers with a market capitalization of less than $2 billion and the S&P 500® Health Care Index for issuers with a market capitalization over $2 billion.

Like all Firm employees, research analysts receive compensation that is impacted by, among other factors, overall firm profitability, which includes revenues from, among other business units, Institutional Equities, Research, and Investment Banking. Research analysts, however, are not compensated for a specific investment banking services transaction. To the extent Leerink Partners' research reports are referenced in this material, they are either attached hereto or information about these companies, including prices, rating, market making status, price charts, compensation disclosures, Analyst Certifications, etc. is available on https://leerink.bluematrix.com/sellside/Disclosures.action.

MEDACorp LLC, an affiliate of Leerink Partners, is a global network of independent healthcare professionals (Key Opinion Leaders and consultants) providing industry and market insights to Leerink Partners and its clients.

In the past 12 months, Leerink Partners has received compensation for providing investment banking services to Pharvaris N.V. and KalVista Pharmaceuticals, Inc.

Leerink Partners expects to receive compensation for investment banking services from Pharvaris N.V. in the next 3 months.

Leerink Partners makes a market in Pharvaris N.V., BioCryst Pharmaceuticals, Inc., Ionis Pharmaceuticals, Inc. and KalVista Pharmaceuticals, Inc.

Leerink Partners has acted as a manager for a public offering of Pharvaris N.V. in the past 12 months.

Leerink Partners has acted as the manager for a public offering of KalVista Pharmaceuticals, Inc. in the past 12 months.

This document may not be reproduced or circulated without our written authority. This document, and any other Leerink Partners research report may not be, in whole or in part, or in any form or manner (i) forwarded, distributed, shared, or made available to third parties, including as input to, or in connection with, any artificial intelligence or machine learning model; (ii) modified or otherwise used to create derivative works; or (iii) used to train or otherwise develop a generative artificial intelligence or machine learning model, without the express

written consent of Leerink Partners. Receipt and review of this document constitutes your agreement with the aforementioned limitations in use.
