IR-XR Franchise Potential Underappreciated; Reit. Buy with New PT of $65

What's New? Following positive Ph3 CHAPTER-3 topline results for deucrictibant XR in HAE (here; deck), mgmt hosted a call to review the detailed data as well as the market opportunity. We reiterate our Buy with a new PT of $65, up from $52, driven by our increased PoS for the LTP program.

Key Debates & Our Takes

- XR Data Beat Expectations, but Stock Move was Muted. CHAPTER-3 has clearly established that oral deucrictibant XR can deliver injectable-like efficacy. However, the space has gotten incredibly crowded, with several comparably effective and safe therapies vying for a piece of the rare disease market (~7K US patients), causing some to shy away from potential tail-end commercial risk.

- **Believe the Street is Underestimating PHVS.** The HAE market has consistently rewarded convenience, with both oral Orladeyo (BCRX, not rated) and Ekterly (Chiesi, private) exceeding early commercial expectations. Deucrictibant XR's injectable-like efficacy positions it to take significant share from injectables, particularly less convenient Takhzyro. Meanwhile, our KOL survey suggests oral Ekterly and deucrictibant IR could capture ~50% of the on-demand segment, largely displacing invasive rescue therapies. We believe investors are undervaluing PHVS' combined revenue opportunity and commercial synergies across the IR-XR franchise.

- Safety In-Line with Peers. The vast majority of AEs on deucrictibant XR were mild-to-moderate, with most common being headache, URI, and nasopharyngitis (slide 11; here). Importantly, GI AEs were balanced vs placebo, differentiating it from Orladeyo.

- **Hepatic profile.** 2 patients on XR (out of 55) experienced asymptomatic Gr3 ALT/AST elevations >5× ULN, but both had normal bilirubin and potential confounding factors (fatty liver or chronic androgen use). One patient stayed on drug and completed the study, while the other discontinued. We believe that label language would likely be comparable to existing LTPs (Table 1).

More From the Call

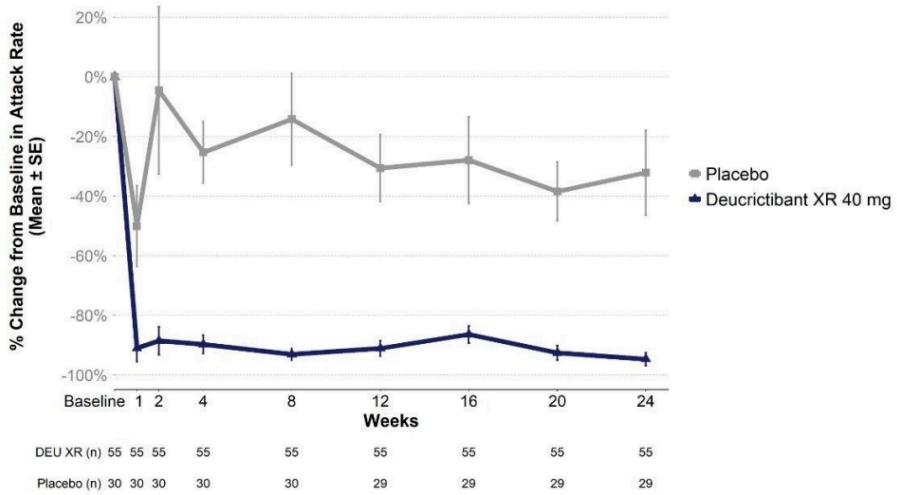

Mgmt. Insights on Potential Commercial Launch

- **IR launch could accelerate XR adoption.** Deucrictibant IR will allow PHVS to establish physician familiarity and patient experience with the MoA ahead of XR approval, simplifying treatment decisions, potentially shortening the typical launch curve. ~95% of the commercial team should be hired by YE26, with initial focus on a concentrated base of ~2,000 core HAE prescribers, which can be well-managed by a lean sales force.
- **Dual-formulation strategy an advantage for payer negotiations; engagement is already underway.** Formulary, reimbursement, and patient-support infrastructure established during the IR launch will provide a meaningful head start when entering the larger LTP market, with the dual formulation potentially creating a more attractive value proposition. >90% of coverage discussions with PBMs, commercial plans, and government payers should be active by IR approval (PDUFA 4/23/27). Mgmt. is already leveraging both RAPIDe-3 and CHAPTER-1 data in payer engagements.

Mgmt. Insights on Competitive Profile

- **Onset of benefit rivals (potentially exceeds) injectables.** Deucrictibant XR appeared to achieve near-maximal efficacy by Wk1, which we view as impressive for an oral therapy and compares favorably with injectable peers and could ease transitions to deucrictibant from other therapies.

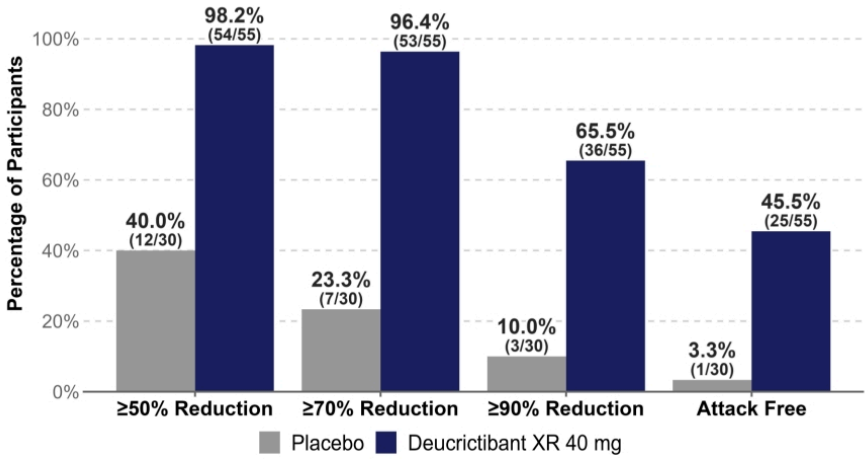

Figure 1 - Rapid Onset of Treatment Effect

Source: Company Presentation

- **Attack-Free Rates Compare Favorably.** Deucrictibant XR delivered a 45% attack-free rate, comparing favorably with reported Takhzyro outcomes in their highest dose (44.4% with Q2W 300mg) and supporting mgmt's injectable-like efficacy positioning, a metric PHVS' KOL, Dr. Riedl, noted is increasingly important to patients.

Figure 2 - Secondary Endpoints

Source: Company Presentation

- **Normal C1 inhibitor data remain encouraging but preliminary.** In the small normal C1-INH subgroup, 2 of 3 deucrictibant-treated patients achieved ~90% attack reduction or were attack-free, providing preliminary support for activity across HAE subtypes.

Model Update. We have increased our PoS for PHVS' LTP program to 90%, which increased our PT to $65 from $52.

IMPORTANT DISCLOSURES APPENDIX

Valuation and Risks

Valuation. Our $65 price target is based on a discounted cash flow (DCF) valuation with cash flows forecasted through 2035, using a 12% discount rate and a 0% terminal growth rate. Key Investment Risks: (1) While early data on deucrictibant appear promising, results from late-stage trials could fall short of expectations. Any delays or unfavorable outcome from its planned clinical trials could affect the company's valuation; (2) Material delays or failure to obtain regulatory approvals could severely affect the viability of Pharvaris' business as a going concern; (3) Projected future sales may not materialize due to unsuccessful launch strategies, lower-than expected uptake, competitive pressure, and/or payor pushback; and (4) Pharvaris is a clinical-stage biotech company, and we do not expect it to be profitable on a continuing basis in the near term. As such, the company is likely to raise additional capital, potentially through secondary stock offerings that could dilute the holdings of current investors.

Analyst Certification

I, Debanjana Chatterjee, PhD, the analyst principally responsible for the preparation of this research report hereby certify that the views expressed in this research report accurately reflect my personal views about the subject security(ies) or issuer(s) and that my compensation was not, is not, or will not be directly or indirectly related to the specific recommendations or views contained in this research report.

The Jones analyst preparing this report is an associated person of JonesTrading Institutional Services LLC ("JonesTrading" or the "Firm"), member FINRA and SIPC.

Analyst Disclosures:

The analyst or a member of the analyst's household does not have a financial interest in the securities of the subject company (including, without limitation, any option, right, warrant, future, long or short position).

The analyst or a member of the research analyst's household does not serve as an officer, director or an advisory board member of the subject company.

The analyst's compensation is not based upon JonesTrading's investment banking revenues and also not from the subject company in the past 12 months.

JonesTrading Disclosures:

Company Name	Disclosure(s)
Kalvista Pharmaceuticals, Inc.	4
Pharvaris N.V.	4

1. JonesTrading or its affiliates beneficially own 1% or more of any class of common equity securities of the subject company.

2. JonesTrading or its affiliates has managed or co-managed a public offering of securities for the subject company in the past 12 months.

3. JonesTrading or its affiliates has received compensation for investment banking services from the subject company in the past 12 months.

4. JonesTrading or its affiliates expects to receive or intends to seek compensation for investment banking services from the subject company in the next 3 months.

5. JonesTrading has received compensation for products or services other than investment banking services from the subject company in the past 12 months.

6. The subject company currently is, or during the 12-month period preceding the date of distribution of this research report was, a client of JonesTrading.

7. JonesTrading makes a market in the subject company's securities at the time this report was published.

All JonesTrading employees and its associate persons, including the analyst(s) responsible for preparing this research report, may be eligible to receive non-product or service specific monetary bonus compensation that is based upon various factors, including total revenues of JonesTrading and its affiliates as well as a portion of the proceeds from a broad pool of investment vehicles consisting of components of the compensation generated by directors, analysts or employees and may affect transactions in and have long or short positions in the securities (options or warrants with respect thereto) mentioned herein.

Although the statements of fact in this report have been obtained from and are based upon recognized statistical services, issuer reports or communications, or other sources that the Firm believes to be reliable, we cannot guarantee their accuracy.

All opinions and estimates included constitute the analyst's judgment as of the date of this report and are subject to change without notice. JonesTrading may affect transactions as agent in the securities mentioned herein.

This research report is prepared for institutional and other qualified investors and is offered for information purposes only; it does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such would be prohibited.

Additional information available upon request.

The Stock Rating System herein consists of the following ratings: Buy, Hold, and Sell.

The appropriate rating is based off the estimated value of the stock over a forward 12-month period, including both share appreciation and anticipated dividends.

The price target represents the analyst's best estimate of the market price in a 12-month period. JonesTrading cautions that price targets are based on assumptions related to the company, industry and investor climate. As such, price targets remain highly subjective.

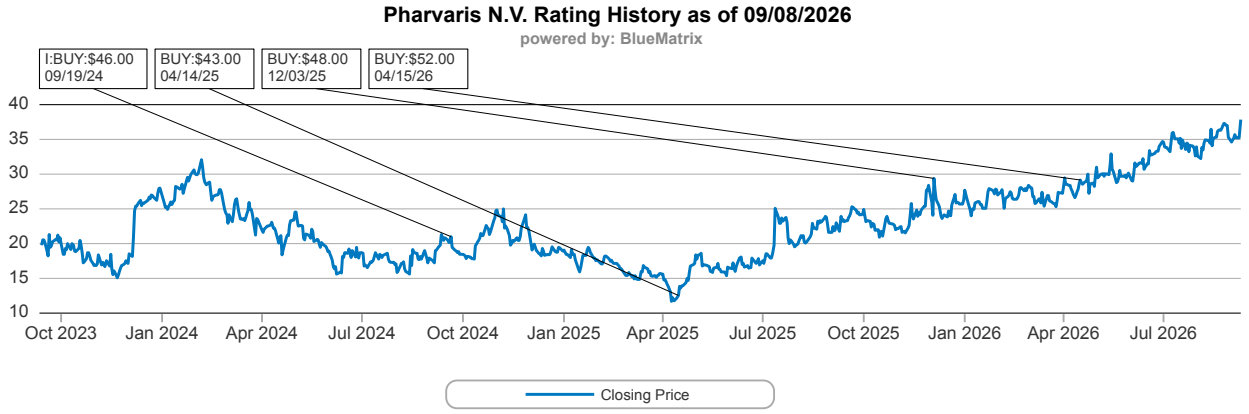

The definition of each rating specific for Jones is as follows:

Buy:	estimated that the subject company's total return will be positive 15% or more in the next 12 months*
Hold:	estimated that the subject company's total return will be in a range not more than 15% positive or negative in the next 12 months; Jones does not provide 12-month price targets on stocks with a Hold rating*
Sell:	estimated that the subject company's total return will be negative 15% or more in the next 12 months*
*	*Ratings may be maintained as long as it is deemed appropriate by Jones notwithstanding price fluctuations that cause the total return percentage to fall outside the specific rating definition.*

The following chart reflects the range of current research report ratings for all companies followed by the analysts of the Firm. The chart also reflects the research report ratings relating to those companies for which the Firm has performed investment banking services.

	Jones Company Coverage		Investment Banking Services Within Past 12 Months	
Rating	Count	Percent	Count	Percent
BUY	103	84%	32	31%
HOLD	20	16%	4	20%
SELL	0	0%	0	0%

Additional Significant Risk Factors and Investment Considerations

The securities or trading strategies discussed in this report may not be suitable for some investors. Investors must independently evaluate each issuer, security, or instrument discussed in this report and consult independent advisors where necessary.

1. Past Performance is not indicative of future results.

2. Market Risk: Securities may decline in value due to factors affecting securities markets generally or particular industries. The value of a security may be worth less than the original investment.

3. Concentration risk: Investing a substantial portion of assets in securities within a single industry or sector of the economy may be subject to greater price volatility or adversely affected by the performance of securities in that particular sector or industry.

4. Leverage Risk: Fluctuations in interest rates on borrowings or the dividend rates on preferred shares as a result of changes in short-term interest rates may reduce the return to common shareholders or result in fluctuations in the dividends paid on the common shares. There is no assurance that a leverage strategy will be successful.

5. Foreign Investment Risk: Investment in foreign securities (both governmental and corporate) may involve a high degree of risk. In regards to debt securities, such risks may impair the timely payment of principal and/or interest.

6. Short selling involves an inordinate amount of risk including the theoretical potential for unlimited losses and losses that can greatly exceed the principal amount invested. In contrast, the potential gain from short selling is generally limited to the principal amount invested. Short sellers can have their stock called away by the lender of the shares shorted, subjecting the short seller to incremental risk. Short sellers by definition must borrow shares, subjecting short sellers to margin risk. The risks cited here with respect to short selling are not all inclusive and investors should consult with their independent advisors prior to engaging in any recommended short selling strategies, including, if applicable, the short sale recommended in this report.

The risks detailed above are not inclusive. Other significant risk factors not identified here may be equally or more important to any particular investor in terms of assessing the overall risks associated with these securities. Further information available upon written request.

The information contained herein is illustrative and is not intended to predict actual results, which may differ substantially from those reflected herein.

Investors should consider this report as only a single factor in making their investment decision.

All materials presented in this document, unless specifically indicated otherwise, are under copyright. None of the material, nor its content, nor any copy of it, may be altered in any way, or transmitted to or distributed to any other party, without the prior express written permission of JonesResearch.
